Lynn Guilford, FIT, E & E, Seattle

A sampling effort involving the collection of approximately 40 groundwater samples has currently been scheduled to begin July 1, 1989, in the Moses Lake area. Per our conversation on May 31, 1989, CLP laboratory space is requested for 40 water samples. The samples are to be analyzed for TCL volatile organic compounds and selected dissolved metals and filtered ions including bromide, calcium, chloride, fluoride, iron, magnesium, manganese, nitrate, orthophosphate, potassium, sodium, carbonate, and bicarbonate. The samples should also be tested for dissolved sulfates, hardness, density, total dissolved solids, and silica dioxide content.
